Abstract

This document present in which way how you use `serbian-def-cyr` package.

1 Introduction

This package present support for serbian language in cyrillic scripts in way which is macro and definitions, such like `abstract`, `title`, `chapter` etc., present in cyrillic scripts. Translations for this macro exist in `babel` package for serbian language in latin script. Package working in T2A font encoding, and code page is cp 1251.

2 How to use this package?

Just put a line `\usepackage{serbian-def-cyr}` in preamble for you document. If you use WinShell us L^AT_EX editor you must in `Options`, `Fonts`, `Script` set on `Cyrillic`, and coding is `Standard`. Also, set the keyboard on serbian language in cyrillic scripts.
