The tutodoc package - Tutorial-style documentation

Christophe BAL

Sep 25, 2024 - Version 1.3.0

Abstract

The tutodoc package 1 is used by its author to semantically produce documentation of $L^{A}T_{E}X$ packages and classes in a tutorial style 2 , and with a sober rendering for reading on screen.

Two important points to note.

- This package imposes a formatting style. In the not-too-distant future, tutodoc will probably be split into a class and a package.
- This documentation is also available in French.

¹The name comes from "tuto-rial-type doc-umentation".

 $^{^{2}}$ The idea is to produce an efficient PDF file that can be browsed for one-off needs. This is generally what is expected of coding documentation.

Contents

I. General formatting imposed

1. Page geometry

The geometry package is loaded with the following settings.

```
\RequirePackage[
  top = 2.5cm,
  bottom = 2.5cm,
  left = 2.5cm,
  right = 2.5cm,
  marginparwidth = 2cm,
  marginparsep = 2mm,
  heightrounded
]{geometry}
```

2. Title and table of contents

The titlesec and tocbasic packages are set as follows.

```
\RequirePackage[raggedright]{titlesec}
% ...
\ifcsundef{chapter}%
          {}%
          {\renewcommand\thechapter{\Alph{chapter}.}}
\renewcommand\thesection{\Roman{section}.}
\renewcommand\thesubsection{\arabic{subsection}.}
\renewcommand\thesubsubsection{\roman{subsubsection}.}
\titleformat{\paragraph}[hang] %
            {\normalfont\normalsize\bfseries}%
            {\theparagraph}{1em}%
            {}
\titlespacing*{\paragraph}%
              {0pt} %
              {3.25ex plus 1ex minus .2ex}%
              {0.5em}
% Source
% * https://tex.stackexchange.com/a/558025/6880
\DeclareTOCStyleEntries[
 raggedentrytext,
 linefill = \hfill,
 indent = Opt,
 dynindent,
 numwidth = Opt,
 numsep = 1ex,
 dynnumwidth
]{tocline}{
 chapter,
 section,
 subsection,
 subsubsection,
 paragraph,
 subparagraph
}
\DeclareTOCStyleEntry[indentfollows = chapter]{tocline}{section}
```

3. Dynamic links

The hyperref package is imported behind the scenes with the settings below.

```
\hypersetup{
  colorlinks,
  citecolor = orange!75!black,
  filecolor = orange!75!black,
  linkcolor = orange!75!black,
  urlcolor = orange!75!black
}
```

II. Select language when loading package

By default, tutodoc is set for English, but it is possible to change the language: for example, a French documentation will use \usepackage[lang = french]{tutodoc}. For the moment, we only have the following two choices.

- 1. **english** is the default value.
- 2. french

i Note.

Language names are those suggested by the babel package.

III. What does that mean in "English"?

The macro \tdocinEN and its starred version are useless for English speakers because they have the following effects.

Cool and top stand for $\tocinEN*{cool} and \tocinEN{top}.$

Cool and top stand for "cool" and "top" in english.

The macro \tdocinEN and its starred version are based on \tdocquote : for example, "*semantic*" is obtained via tdocquote{semantic}.

i Note.

As the text "in English" is translated into the language indicated when tutodoc is imported, the macro \tdocinEN and its starred version become useful for non-English speakers.

IV. Highlighting content

i Note.

The environments presented in this section a add a short title indicating the type of information provided. This short text will always be translated into the language indicated when the **tutodoc** package is loaded.

 $^a\mathrm{The}$ formatting comes from the $\mathtt{keytheorems}$ package.

1. Examples

Numbered or unnumbered examples can be indicated using the \begin{tdocexa}...\end{tdocexa} environment, which offers two optional arguments.

- 1. The 1st argument between brackets <...> can take the values **nb** to number, which is the default setting, and **nonb** to not number.
- 2. The 2nd argument in square brackets [...] is used to add a mini-title.

Here are some possible uses.

Bla, bla, bla	
<pre>\begin{tdocexa} Ble, ble, ble \end{tdocexa}</pre>	Bla, bla, bla
\begin{tdocexa}[Wonderful]	Example 1. Ble, ble, ble
Bli, bli, bli \end{tdocexa}	Example 2 (Wonderful). Bli, bli, bli
\begin{tdocexa} <nonb></nonb>	Example. Blo, blo, blo
Blo, blo, blo \end{tdocexa}	Example (Superb). Blu, blu, blu
<pre>\begin{tdocexa}<nonb>[Superb] Blu, blu, blu \end{tdocexa}</nonb></pre>	

🖍 Important

The numbering of the examples is reset to zero as soon as a section with a level at least equal to a *subsubsection* is opened.

• Tip.

It can sometimes be useful to return to the line at the start of the content. Here's how to do it (this trick remains valid for the environments presented in the following sub-sections). Note in passing that the numbering follows that of the previous example as desired.

begin{tdocexa}	I	
leavevmode	I	
\begin{enumerate}		
\item Point 1.	1. Point 1.	
\item Point 2.	2. Point 2.	
\end{enumerate}	I	
$end{tdocexa}$		

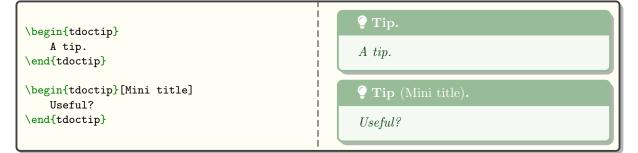

2. Some remarks

Everything happens via the $\begin{tdocrem} ... \end{tdocrem} environment, as in the following example.$

```
\begin{tdocrem}
Just one remark...
\end{tdocrem}
Remark. Just one remark...
\begin{tdocrem}[Mini title]
Useful?
\end{tdocrem}
```

3. A tip

The \begin{tdoctip} ... \end{tdoctip} environment is used to give tips. Here's how to use it.

i Note.

Colors are provided by the extensible macros \tdocbackcolor and \tdocdarkcolor, which have the following codes.

\NewExpandableDocumentCommand{\tdocbackcolor}{m}{#1!5} \NewExpandableDocumentCommand{\tdocdarkcolor}{m}{#1!50!black}

4. Informative note

The \begin{tdocnote} ... \end{tdocnote} environment is used to highlight useful information. Here's how to use it.

<pre>\begin{tdocnote} Something useful to tell you \end{tdocnote}</pre>	Note. Something useful to tell you
<pre>\begin{tdocnote}[Mini title] Useful? \end{tdocnote}</pre>	• Note (Mini title). Useful?

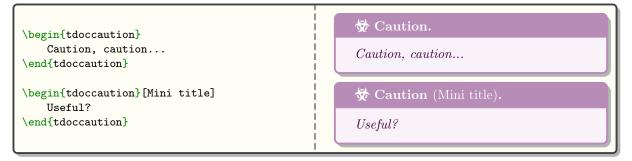

5. Something important

The $\begin{tdocimp} ... \end{tdocimp} environment is used to indicate something important but harmless.$

6. Caution about a delicate point

The \begin{tdoccaution} ... \end{tdoccaution} environment is used to indicate a delicate point to the user. Here's how to use it.

7. Warning of danger

The \begin{tdocwarn} ... \end{tdocwarn} environment is used to warn the user of a trap to avoid. Here's how to use it.

V. Specify packages, classes, macros or environments

Here's what you can type semantically.

\tdoccls{myclass} is for	
<pre>\tdocpack{mypackage} is for</pre>	myclass is for
<pre>\tdocmacro{onemacro} is for</pre>	mypackage is for \onemacro is for
\tdocenv{env} produces	\begin{env}\end{env} produces We also have :
We also have :	\begin{env}[opt1] <opt2>\end{env}</opt2>
\tdocenv[{[opt1] <opt2>}]{env}</opt2>	

Remark. The advantage of the previous macros over the use of \tdocinlatex, see the section 1. page 11, is the absence of colouring. Furthermore, the \tdocenv macro simply asks you to type the name of

the environment 3 with any options by typing the correct delimiters 4 by hand.

😤 Warning. The optional argument to the \tdocenv macro is copied and pasted during rendering. This can sometimes require the use of protective braces, as in the previous example.

VI. Origin of a prefix or suffix

To explain the names chosen, there is nothing like indicating and explaining the short prefixes and suffixes used. This is easily done as follows.

\tdocpre{sup} relates to	
	sup relates to
<pre>\tdocprewhy{sup.erbe} means</pre>	sup·erbe means
	$sup \cdot er$ for
<pre>\emph{\tdocprewhy{sup.er} for}</pre>	

Remark. The choice of a full stop to split a word allows words with a hyphen to be used, as in $\toprewhy{bric.k-breaker}$ which gives bric.k-breaker.

VII. A real-life rendering

It is sometimes useful to render code directly in the documentation. This type of rendering must be dissociable from the explanatory text.

1. With a coloured stripe

Example 1 (With default text). It can be useful to show a real rendering directly in a document.⁵ This is done via \begin{tdocshowcase} ... \end{tdocshowcase} as follows.

```
\begin{tdocshowcase}
    \bfseries A bit of code \LaTeX.
    \bigskip
    \emph{\large End of the awful demo.}
\end{tdocshowcase}
```

The result is the following rendering. 6

Start of the real output

A bit of code LATEX.

End of the awful demo.

End of the real output

Remark. See the section 4. on page 13 to easily obtain code followed by its actual rendering as in the previous example.

³In addition, \tdocenv{monenv} produces \begin{monenv}...\end{monenv} with spaces to allow line breaks if necessary. $$^4\rm Remember$ that almost anything is possible from now on.

⁵Typically when making a demo.

⁶Behind the scenes, the strip is created effortlessly using the clrstrip package.

i Note.

The explanatory texts adapt to the language chosen when tutodoc is loaded.

Example 2 (Change the default colour and/or text).

This will produce the following.

My beginning

 $\blacksquare My \ end$

i Note.

You've probably noticed that red is used as a base to obtain the colors used.

- The background color is provided by \tdocbackcolor.
- The color of titles and lines is provided by \tdocdarkcolor.

These expandable macros have a single argument, the chosen color, and accept the following codes.

\NewExpandableDocumentCommand{tdocbackcolor}{m}{#1!5}
NewExpandableDocumentCommand{tdocdarkcolor}{m}{#1!50!black}

.

You also have to know that behind the scene, the \tdocruler macro is used.

\tdocruler{A decorated pseudo-title}{red}

 $\blacksquare A \ decorated \ pseudo-title \blacksquare$

😤 Warning.

With the default settings, if the code to be formatted begins with an opening bracket, use \string as in the following example.

\begin{tdocshowcase}
 \string[This works...]
\end{tdocshowcase}

This will produce the following.

Start of the real output

[This works...]

End of the real output

2. Without a colour strip

The rendering of \begin{tdocshowcase} ... \end{tdocshowcase} with a coloured strip may not be suitable, or sometimes may not be acceptable despite the work done by clrstrip. It is possible not to use a coloured strip, as we will see straight away.

Example 1. The use of \begin{tdocshowcase} [nostripe] ... \end{tdocshowcase} indicate to not use clrstrip. Here is an example.

This will produce the following.

Start of the real output

End of the real output

Example 2 (Change the default colour and/or text).

This will produce the following.

My beginning

 $= My \ end$

3. By importing the LATEX code

To obtain renderings by importing the code from an external file, instead of typing it, simply use the \tdocshowcaseinput macro whose option uses the syntax of that of \begin{tdocshowcase}... \end{tdocshowcase} and the mandatory argument corresponds to the path of the file.

Example. The following was obtained via \tdocshowcaseinput{external.tex}.

Blablobli, blablobli, blablobli, blablobli, blablobli, blablobli...

End of the real output

Start of the real output

As for \tdocshowcaseinput[color = orange]{external.tex}, this will produce the colour change shown below.

Start of the real output

Blablobli, blablobli, blablobli, blablobli, blablobli...

End of the real output

VIII. Use cases in \mathbb{E}_{TEX}

Documenting a package or class is best done through use cases showing both the code and the corresponding result. 7

⁷Code is formatted using the minted package.

1. "Inline" codes

The \tdocinlatex macro⁸ can be used to type inline code in a similar way to \verb . Here are some examples.

```
1: \tdocinlatex|$a^b = c$|
2: \tdocinlatex+\tdocinlatex|$a^b = c$|+
1: $a^b = c$
2: \tdocinlatex|$a^b = c$|
2: \tdocinlatex|$a^b = c$|
1: $a^b = c$
2: \tdocinlatex|$a^b = c$|
2: \tdocinlatex |$a^b = c$|
2: \tdocinlatex |$a
```

2. Directly typed codes

Example 1 (Side by side). Using \begin{tdoclatex}[sbs]...\end{tdoclatex}, we can display a code and its rendering side by side. Consider the following code.

\begin{tdoclatex}[sbs]
 \$A = B + C\$
\end{tdoclatex}

This will produce the following.

\$A = B + C\$

Example 2 (Following). \begin{tdoclatex} ... \end{tdoclatex} produces the following result, which corresponds to the default option std . ⁹

Example 3 (Just the code). Via \begin{tdoclatex}[code] ... \end{tdoclatex}, we'll just get the code as shown below.

\$A = B + C\$

😤 Warning.

With default formatting, if the code begins with an opening bracket, the default option must be explicitly indicated. Consider the following code.

```
\begin{tdoclatex}[std]
    [Strange... Or not!]
\end{tdoclatex}
```

This will produce the following.

⁸The name of the macro \tocinlatex comes from "*in·line* MTEX".

⁹ std refers to the "standard" behaviour of tcolorbox in relation to the minted library.

[Strange... Or not!]

```
[Strange... Or not!]
```

Another method is to use the \string primitive. Consider the following code.

```
\begin{tdoclatex}
    \string[Strange... Or not!]
\end{tdoclatex}
```

This will produce the following.

```
[Strange... Or not!]
```

[Strange... Or not!]

3. Imported codes

For the following codes, consider a file with the relative path examples-listing-xyz.tex, and with the following contents.

% Just one demo. \$x y z = 1\$

The \tdoclatexinput macro, shown below, expects the path of a file and offers the same options as the \begin{tdoclatex} ... \end{tdoclatex} environment.

Example 1 (Side by side).

\tdoclatexinput[sbs]{examples-listing-xyz.tex}

This produces the following layout.

% Just one demo. \$x y z = 1\$

xyz = 1

Example 2 (Following).

\tdoclatexinput{examples-listing-xyz.tex}

This produces the following formatting where the default option is **std**.

```
% Just one demo.
$x y z = 1$
xyz = 1
```

Example 3 (Just the code).

\tdoclatexinput[code]{examples-listing-xyz.tex}

This produces the following layout.

% Just one demo. \$x y z = 1\$

4. Imported codes put into practice

Example 1 (Showcase). The following comes from \tdoclatexshow{examples-listing-xyz.tex}.

Start of the rendering in this doc.

% Just one demo.
% y z = 1%

This gives :

xyz = 1

End of the real output
End of the real output
End of rendering in this doc.

Note.

The default texts take into account the language chosen when loading the package tutodoc.

Example 2 (Changing the explanatory text). Using the key explain, you can use custom text. Thus, tdoclatexshow[explain = Here is the actual rendering.]{examples-listing-xyz.tex} will produce the following.

Start of the rendering in this doc.

% Just one demo.

$$x y z = 1$$

Here is the actual randering

Here is the actual rendering.

Start of the real output

xyz = 1

End of the real output

End of rendering in this doc.

Example 3 (The options available). In addition to the explanatory text, it is also possible to use all the options of \begin{tdocshowcase} ... \end{tdocshowcase}, see VII. page 8. Here is an example to illustrate this.

This will produce the following.

Start of the rendering in this doc.

% Just one demo. \$x y z = 1\$ What comes next is colourful...

Rendering below. xyz = 1Finished rendering. • End of rendering in this doc.

IX. Indicate changes

To make it easier to monitor a package, it is essential to provide a history indicating the changes made when a new version is published.

1. When?

You can either date something, or version it, in which case the version number can be dated.

Example 1 (Dating new products). The \tdocdate macro is used to indicate a date in the margin, as in the following example.

\medskip % CAUTION! This prevents overlapping. \tdocdate{2023-09-24} \medskip % CAUTION! This prevents overlapping. \tdocdate[gray]{2020-05-08}

This gives :

Start of the real output

End of the real output

Example 2 (Versioning new features, possibly with a date). Associating a version number with a new feature is done using the \tdocversion macro, with the colour and date being optional arguments.

\tdocversion[red] {10.2.0-beta} [2023-12-01] \bigskip % CAUTION! This prevents overlapping. $tdocversion{10.2.0-alpha}$

This gives :

Start of the real output

10.2.0-beta 2023-12-01 10.2.0-alpha

End of the real output

🖍 Important.

- 1. The \tdocdate and \tdocversion macros require two compilations.
- 2. The final rendering of the dates takes into account the language specified when loading the package tutodoc: for example, if French is selected, the dates will be displayed in the format DD/MM/YYYY.

😤 Warning.

Only the use of the digital format YYYY-MM-DD is verified. ^a, and this is a choice! Why? Quite simply because dating and versioning explanations should be done semi-automatically to avoid any human bugs.

 $^a\mathrm{Technically},$ checking the validity of a date using $\mathrm{IAT}_{\mathrm{E}}\mathrm{X3}$ presents no difficulty.

2. What's new?

tutodoc offers different environments to indicate quickly and clearly what has been done during the latest changes.¹⁰

Example 1 (For new features).

\begin{tdocnew}	✤ New.
\item Info 1 \item Info 2	• Info 1
\end{tdocnew}	• Info 2

Example 2 (For updates).

\begin{tdocupdate}	🎇 Update.	٦
\item Info 1 \item Info 2	• Info 1	
\end{tdocupdate}	• Info 2	

Example 3 (For breaks).

\begin{tdocbreak}	P Break.
\item Info 1 \item Info 2	• Info 1
\end{tdocbreak}	• Info 2

 $^{10}\mathrm{The}$ user doesn't need all the technical details.

Example 4 (For problems).

\begin{tdocprob}	OPROBLEM.
\item Info 1 \item Info 2	• Info 1
\end{tdocprob}	• Info 2

Example 5 (For fixes).

\begin{tdocfix}	🖌 FIX.
\item Info 1 \item Info 2	• Info 1
$\end{tdocfix}$	• Info 2

Example 6 (Selectable themes with an icon).

<pre>\begin{tdoctopic}{Don't look}[\faEyeSlash] % An icon from fontawesome5.</pre>	🎘 Don't look.
\item Info 1	• Info 1
\item Info 2 \end{tdoctopic}	• Info 2

Example 7 (Selectable themes without icons).

<pre>\begin{tdoctopic}{End of icons} % This is where the point needs to be put.</pre>	End of icons.
\item Info 1	• Info 1
\item Info 2 \end{tdoctopic}	• Info 2

X. Ornaments

Let's finish this documentation with a few small formatting tools that can be very useful.

Bla, bla, bla	
\tdocsep % Practical for demarcation.	
This works with enumerations.	Bla, bla, bla
\begin{itemize} \item Underline.	
\item Something else useful. \end{itemize}	This works with enumerations.Underline.
\tdocsep % Uniform behaviour.	• Something else useful.
Ble, ble, ble	
Bli, bli, bli	Ble, ble, ble Bli, bli, bli
<pre>\tdocxspace % Subtle space % but useful.</pre>	Blo, blo, blo Blu, blu, blu
Blo, blo, blo	
Blu, blu, blu	

XI. History

O PROBLEM.

• Version 3 of minted cannot be used for the moment as it contains bugs: see https://github.com/gpoore/minted/issues/401. We therefore force the use of version 2 of minted.

P BREAK.

• The tdocimportant environment has been renamed tdocimp for simplified input.

NEW.

- Change log: proposed environments use icons.
- Content highlighting: colored frames with icons are proposed for the following environments. multicolsep 3.0pt plus 1.0pt minus 0.75pt

1. tdoccaution	3. tdocnote	$5. {\tt tdocwarn}$
2. tdocimp	4. tdoctip	

1.2.0-a 2024-08-23

1.3.0

2024-09-25

- \tdocversion
 - 1. The version number is above the date.
 - 2. The spacing is better managed when the date is absent.

🗲 Fix.

🗱 Update.

• Content highlighting: the French translations of "caution" and "danger" were incorrect.

1.1.02024-01-06

New.

- Change log : two new environments.
 - 1. \begin{tdocbreak} ... \end{tdocbreak} for breaking changes which are not backward compatible.
 - 2. \begin{tdocprob} ... \end{tdocprob} for identified problems.
- \tdocinlatex: a light yellow is used as the background color.

*F*IX.

- \tdocenv: spacing is now correct, even if the babel package is not loaded with the French language.
- \begin{tdocshowcase}[nostripe]...\end{tdocshowcase}: page breaks around "*framing*" lines should be rare from now on.

First public version of the project.
