

# class Pod::Render

Render POD documents to HTML, PDF or MD

## Table of Contents

1	<a href="#">Synopsis</a>
2	<a href="#">Methods</a>
2.1	<a href="#">render</a>

## Synopsis

```
use Pod::Render;
my Pod::Render $pr .= new;
$pr.render( 'html', 'my-excellent-pod-document.pod6');
```

## Methods

### render

```
multi method render ( 'html', Str:D $pod-file )
multi method render ( 'pdf', Str:D $pod-file )
multi method render ( 'md', Str:D $pod-file )
```

Render the document given by `$pod-file` to one of the output formats html, pdf or markdown. To generate pdf the program `prince` is used so that program must be installed. The style is one of the following styles; pod6, default, desert, doxy, sons-of-obsidian or sunburst.
